

Guide of handling with adhesive agents

The wax can cause stains on the floor and other objects in the sport floors.
Below you can find information about removing and avoiding wax stains with Trimona products.

Cleaning of handball

To reduce wax stains, only clean balls should be used during the training and the game.
Trimona recommend the following procedure:

Balls which were slightly polluted should be cleaned up with a wet cloth and Trimona Handwaschlotion, directly after the game.

Balls with old and especially tenacious wax stains should be cleaned up with a wet cloth and Trimona TN 2.

According to our experiences both purification processes were suitable for all producers.
Please contact us if you are interested in any product tests.

Residues because of depots

Most of the handball player store grip products on their shoes to use it during the game.
Falls during the game are causing soiling on the sport floors.

We recommend to displacing the depots on the inner side of the shoes, so it is improbable that the players pollute the floor.

Contamination of doors and changing cubicle

The player should wash their hands before they leave the sport floors to avoid residues of wax.

We advise to prepare some Trimona Handwaschlotion and water on the brink of the field, so the players can clean their hands immediately after the game or training.

Cleaning of sport floors

Residues of adhesive are to be found after each handball game.
For the effective cleaning Trimona recommend the following procedure:

In general it is easier to remove fresh residues than dried-up.
It is recommendable to clean the rough stains directly after the game with a wet cloth and cleaning agent.

You can choose the suitable agent from our range of products.
